

## ...oldies but goodies!!!

Dear valued West Coast customer,

I recently got reminded about the incredible performance of "Procion H-EXL" reactive dyes solving penetration issues on tightly twisted "Tencel" yarn. The high level of neutral exhaustion (~ 70%), the possibility to heat to 195°F for improved migration and the 180°F fixation temperature provide an excellent base for a successful dyeing. The Procion H-EXL dyes are "oldies, but sure are goodies. Consider "Procion H-EXL" Monochlorotriazine dyes to resolve your level dyeing issues.

Eight Procion H-EXL Hot Reactive Dyes available

***The robust 80°C (180°F) Hot Dyes for resolving penetration problems!!!***

***What are the key benefits?***

- + Excellent levelling and penetration***
- + High temperature dyeing benefits***
- + Great option for high affinity fibers (i.e. Tencel)***
- + Short dyeing cycles***
- + Eight products to cover a wide range of shades***
- + Procion Turquoise H-EXL to be added shortly***

Penetrate tough fibres and hit your target with H-EXL'S

Take advantage of the excellent performance of Procion H-EXL dyes. If you would like samples or more information please contact either me or Camran Agange by phone or with a click below:
